This intelligent system not only supply effortless parking strategies but also supports in distributing advantageous result to the drivers.

Parking management is an advanced choice to deal with the expanding growth of vehicles. It gives timely indication about the available parking spaces in proximity. It not only provides simple parking programs but also helps in delivering convenient solutions for the drivers. To resolve the problem of parking security intelligent parking system allows you to identify and authorize the vehicles at both entry and exit points.

“**PARCADO**” software often requires very little input from the employer. The employer is required to input any vehicle information and hours—then the software calculates the information and

performs free space automatically. Most “**PARCADO**” car parking management software is automatically updated whenever space occupied or none occupied and will remind users.

Features of our “PARCADO” Car Parking Management

- Vertical Lifts – A hydro-electric system allows vehicles to be moved vertically until an available parking spot is located. The actual layout of the parking spaces is optimized for different vehicles, makes and models.
- Entrance Platform – The entrance platform is an access point that connects to the storage system. The design of the platform is sturdy in order to eliminate excessive amounts of noise and vibration. Some systems also use turntables to optimize movement between the send-off point and the destination.
- Vehicle Identification – Automatic identification of the vehicle is the key to creating an efficient and cost-effective system for parking cars. The driver can get a time stamp that shows all the data related to the location of the vehicle and the time of the drop-off. This serves as a receipt in addition to a convenient method of ordering the return of the car.
