

“ELPIDA” Enterprise Resource Planning (ERP) System for your business

Our Company “Opus Technology Limited” provides top ERP System "Elpida" ERP an enterprise resource planning system for office and commercials. It refers about ERP software the systems and software packages used by organizations to manage day-to-day business activities, such accounting, procurement, project management and manufacturing. ERP systems tie together and define an embarrassment of business processes and enable the flow of data between them.

This intelligent "Elpida" ERP management system is only potential with an efficient management system and the smart control for an economic resource planning, electronic resource planning, engineering resource planning and enterprise and resource planning.

"Elpida" ERP is an enterprise resource planning system which is designed around a common, defined data structure (schema) that usually has a common database. ERP systems provide access to ERP rise data from multiple activities using common constructs and definitions and common user experiences. The benefits of enterprise resource planning are the central collection of data for wide distribution. Instead of several standalone databases with an endless inventory of disconnected spreadsheets, ERP consultant systems bring order to the chaos so

that all users—from the CEO to accounts payable clerks—create, store, and use the same data derived through common processes. With a secure and centralized data repository, everyone in the organization can be confident that data is correct, up to date, and complete. Data integrity is assured for every task performed throughout the organization, from a quarterly financial statement to a single outstanding receivables report, without deploying error-prone spreadsheets.

"Elpida" ERP system is today's workforce demands access to twenty-first century technology—such as mobile and social with an easy-to-use interface—that enables them to easily collaborate and share information. And they are unlikely to accept antiquated processes, out-of-date technologies, and ugly interfaces. Organizations that fail to meet these expectations put their future at risk.

Why should use our “ELPIDA” ERP System?

- Saving Money
- Improved Collaboration
- Better Analytics
- Improved Productivity
- Happier Customers
- Simplified Regulatory Compliance
- Improved Inventory and Production Management

Features of our “ELPIDA” ERP System

Competition

"Elpida" ERP It's true that ERP software requires a major investment, but there's also an even bigger cost in not making the investment. While some manufacturers choose to stick to the tried-and-true methods of the past, others seek technology solutions. Manufacturers cannot afford to put off an ERP implementation while their competition invests in ERP and starts reaping the many benefits we'll touch on below.

Efficiency

"Elpida" ERP solution eliminates repetitive processes and greatly reduces the need to manually enter information. The system will also streamline business processes and make it easier and more efficient for companies to collect data, no matter what department they're working in.

Forecasting

"Elpida" ERP software gives your users, and especially managers, the tools they need to create more accurate forecasts. Since the information within ERP is as accurate as possible, businesses can make realistic estimates and more effective forecasts.

Collaboration

"Elpida" ERP systems is a centralized process. The software also touches on almost every aspect of a business, thus naturally encouraging collaborative, interdepartmental efforts.

Integrated Information

"Elpida" ERP No more issues with data spread across separate databases; all information will be housed in a single location. This means you can integrate platforms like your CRM software with the ERP system, keeping data consistent, accurate, and unique. Know your customer, their orders, and your inventory, all in one place.

Cost Savings

"Elpida" ERP software reduces administrative and operations costs. It allows manufacturers to proactively manage operations, prevents disruptions and delays, breaks up information logjams and helps users make decisions more quickly. If you've chosen the right solution for your business, and the right service provider who meets your needs, you're bound to see a powerful ROI

An Overview on the Development of "ELPIDA" ERP

Our Company "Opus Technology Limited" provides "Elpida" ERP software allows you to manage your business activities by integrating your back and front office applications. The primary objective of an ERP system is to develop a single environment that enables the disparate functions of your business to share corporate data through a centralized data repository. This not only ensures your data is available throughout your organization, but that it is consistent. With complete information available ERP can streamline your operations giving you access to real time business intelligence. You are then able to make the right decisions with the right vendor.

At its most basic level, ERP software integrates these various functions into one complete system to streamline processes and information across the entire organization. The central feature of all ERP systems is a shared database that supports multiple functions used by different business units. In practice, this means that employees in different divisions—for example, accounting and sales—can rely on the same information for their specific needs.

Advantages and benefits of enterprise resource planning “ELPIDA”

ERP solution can confound even the most experienced IT professional. It's this confusion that leads to many of the myths and fallacies surrounding ERP software selection. Here's a quick reality check as you embark on your ERP selection project:

1. ERP Cost is the Biggest Factor

If you're purchasing an ERP system, it's to improve your business operations for years to come. It might be more cost effective to buy a comprehensive system with a bigger price tag than to “save” money on less-expensive software that doesn't fit your company's needs. The best ERP system is one that meets your anticipated requirements now and, in the future, —and it may not be the cheapest.

2. ERP is an IT Solution

Your IT team will most likely spend the most time conducting the ERP research and performing the implementation, but your entire company will get the benefits. Those in charge of your company's most important functions need to play a big role in the selection process. Selecting an ERP solution may not seem like it needs much involvement from your executive team, but they have the most insight into individual operations.

3. The More ERP Functionality, the Better

A software company can thrive by making software that meets the needs of their target market without overwhelming them with unneeded functionality. Likewise, many organizations can become more successful by simply streamlining operations.

4. Have External ERP Experts Choose Your System

A consultant might have a better understanding of the software and even your industry—but your own IT team plays a critical role by applying their knowledge of your company to ensure a successful ERP selection project.

5. Pick the Solution That Checks all the Boxes

Your ERP software choice may seem like the perfect fit on paper—but will it meet your needs in the real world of your business environment. It's always a good idea to get live demonstrations of your critical processes or a software trial before signing any long-term deal. Unfortunately, failed ERP implementations and buyer remorse are far too common.
