Supply Chain Management System

About Opus Technology Limited

Opus Technology Limited is a software development firm, experienced in developing custom software, mobile apps, web development, artificial intelligence, games, animation and so. Founded in 2012, Opus Technology Ltd delivers advanced software today that empowers, innovates, and transforms the office completely and digitally for all our clients tomorrow. Collaborating with our clients to establish efficient, unified, and trusted data insights is what we excel at, sharing all of our state-of-the-art technology and unmatched skills. Using years of experience, our range of solutions tackle specific process, planning, consolidation, reporting and analysis challenges with adaptable, out-of-the-box functionality, designed to deliver a faster time to value whilst remaining easy to use.

About Dostavi – Supply Chain Management System

Supply Chain Management plays a crucial role in businesses whose operations involve logistics, warehousing, manufacturing and production. Our system is primed with a state-of-the-art supply chain management module that helps you handle all aspects of procurement, sales and logistics with ease and efficiency.

Supply chain management software is a category of software applications designed to facilitate and optimize the various activities involved in managing the flow of goods, services, and information within a supply chain. These software solutions help organizations streamline their supply chain processes, improve efficiency, reduce costs, and enhance overall supply chain visibility and control.

The SCM module would also assist you in managing supplier relationships and assessing risks through its analytics tools and reporting capabilities. The module could be easily incorporated with financials for instant data synchronization and prevention of data duplication.

Benefits of Dostavi – Supply Chain Management System

- AUTOMATION driven tools that simplify supply chain operations and take care of redundant tasks.
- INTEGRATED with financials, sales, purchase, inventory and warehouse modules.
- EASY UI with graphically rich and quickly deployable features.
- READY features and real time data synchronization through cloud hosting.

Features of Dostavi

The features of Dostavi SCM software vary depending on the specific product and its intended use, but many SMC software packages include the following core features:

- ❖ Ability to integrate throughout the supply chain.
- ❖ Real-time and collaboration capabilities.
- ❖ Process optimization abilities.
- ❖ Analytics and forecasting.
- ❖ Customization.
- ❖ Cloud-based access and mobility.
- ❖ Security.
- ❖ Scalability.

Module Details

Planning & Demand Forecasting

The planning processes still rely on tricky and rigid spreadsheets, unable to reflect and accurately predict demand volatility. Thus, the implementation of modern demand forecasting software can give you a huge competitive advantage, bringing transparency and reliability into predictions.

Procurement Management

This module will speed up the workflow, enhance transparency, save time, and, finally, reduce costs, which is a key priority for most procurement leaders. The core functionality of procurement software includes e-sourcing, preliminary data collection, automated evaluation, invitation to tender, e-auction, contract management, vendor management

Inventory Management

Inventory management capabilities help optimize inventory levels to ensure that your company never has to deal with overstocking or understocking. Real-time tools let you know where your inventory is at any given moment, allowing you to operate precisely. Built-in inventory management ensures that your stock levels are optimized.

Requisition Management

This feature enables users to create purchase requisitions or purchase requests for goods or services needed by various departments within the organization. Requisitions may require approval workflows, ensuring proper authorization before proceeding with the purchase.

Purchase Order (PO) Management

The purchase module allows users to generate and manage purchase orders. It includes functionalities such as PO creation, modification, and cancellation. The system typically tracks order details like item descriptions, quantities, unit prices, delivery dates, and terms and conditions.

RFQ And Bid Management

Request for Quotation (RFQ) functionality allows organizations to send out RFQs to selected suppliers, inviting them to provide quotes for specific products or services. The system helps manage the bidding process, allowing suppliers to submit their proposals electronically. It facilitates comparison and analysis of received bids for informed decision-making.

Order And Billing Management

Flexible order management capabilities are best, as they ensure that the solution can work with your unique order needs and are highly configurable. Orders are how you generate profits, so a flexible, built-in order management system is a must-have for any business.

Logistics And Transportation Tools

To reduce overall operational costs and remove any kinks from the supply chain, these capabilities should be included within your chosen supply chain management solution. Dispatch management, appointment scheduling and yard management may all be included as part of your built-in logistics and transportation tools. Transportation and logistics tools ensure that materials are shipped efficiently and cost-effectively.

Supplier Collaboration

Many SCM software solutions also provide a self-service portal where suppliers can access relevant information and submit requests, all directly through your company's supply chain management solution. Supplier collaboration functions keep suppliers, customers and other key players in the loop. Empowered partners smoother supply chain.

Warehouse Management

Since warehouse operations are an important aspect of your supply chain, choosing a solution that lacks built-in warehouse management solutions could complicate and hinder the overall supply chain process. Yet with warehouse management, your company can oversee receiving, put away, replenishment and cross docking. Your warehouse is an important part of your overall supply chain. Make sure that your chosen SCM software will manage all necessary warehouse processes.

Security

The primary focus of Opus Technology Limited is to keep your data safe. As the system deals with important user and company information, it should require safety protocol to ensure the safety of the information. The online training portal management system provides security through the ISO standard, GDPR complaint, registered and trademark organization.

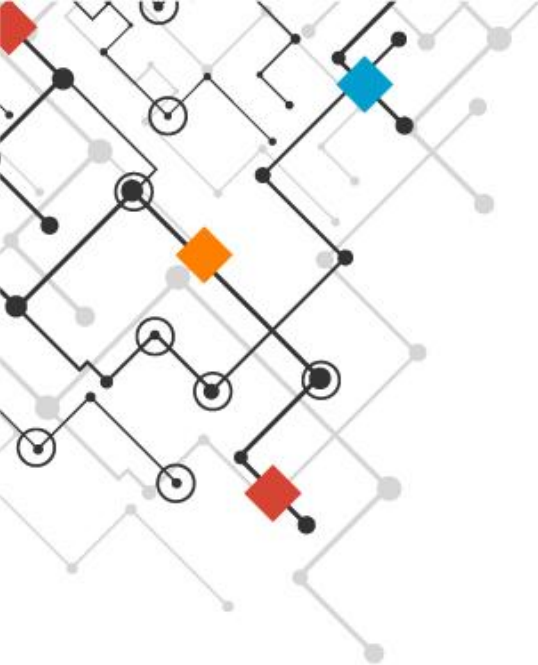

ISO standard

The standardization of the online training portal system ensures the safety and quality of operations by providing the guidelines to meet learners' and consumer's expectations. The ISO certification for the system ensures the compliance training more efficiently within the scheduled time automatically with proper system configuration. ISO 9001:2015 is the international standard that specifies requirements for Quality Management System (QMS). Opus Technology Limited is an ISO 9001:2015 certified organization, following their high standards for consistently providing products and services to customers to which other organizations can certify.

GDPR Compliant

The online training portal system has the ethical duty to ensure the safety of the information with the principles of availability, privacy, integrity, and confidentiality. It means safeguarding the information is the responsibility of the system and should be provided to those who can access it. Our system completed the GDPR compliance and it follows the guidelines for the collection and processing of personal information from learners.

Finally, centralized learning is another major benefit provided by Online Training Portal. It allows an organization to safely organize and store all big data in one location. This allows instructors and admins to more easily update and maintain learning materials. It also helps produce effective training that is consistent across the organization. Furthermore, it includes advanced encryption features that help guarantee the data and content remain secure.
